

CUSTOMER SUCCESS STORY

Global Brewery eliminates raw materials receipt errors and boosts accountability

How visibility into inefficiencies and actionable insights improved production and management of materials for large global brewery. As one of the largest breweries in the world, this company produces beer that is then distributed globally.

THE CHALLENGE

This global brewery was visually spot checking trucks that delivered brewing ingredients and materials. More often than not they saw mismatches between Bills of Lading, Ship Tickets, and even delivery locations.

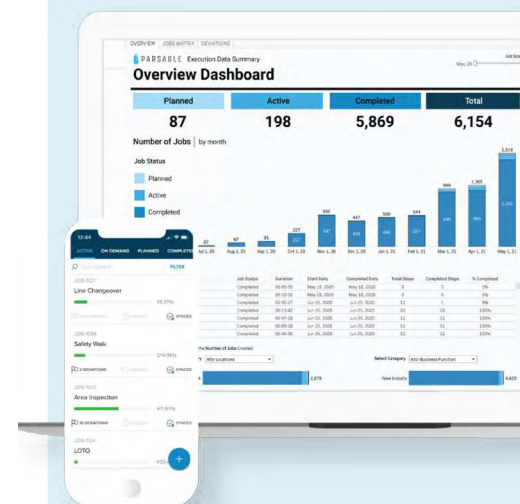

They even received the wrong materials or someone else's materials which then hindered production and showed a lack of accountability.

SUCCESS CRITERIA

- » Need to accurately capture data and digitize processes in order to optimize operations.
- » Be able to collect and analyze quality data faster, and allow inspectors to report inconsistencies right away.
- » Provide quality managers and their teams with greater visibility and control over real-time data captured.
- » Need an easy-to-use and easy to set-up application for teams to start recording critical information and track processes.
- » Need to see measurable improvements in time it takes to conduct data analysis.

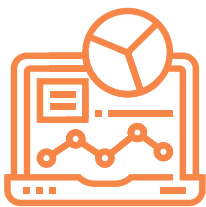

“With the data captured in Parsable, this global brewery can now do analysis in considerably less time.”

THE SOLUTION

- » Instead of relying on a 6-inch binder and paper-based reporting, the team has digitized their four brewing material receipts and two truck unloading reports: Diazyme, Chillgard, Phosphoric Acid, PVPP, Dextrose, ISS.
- » Workers are able to use media capture to record bills of Lading, Seals, Certificates of Analysis, and other shipping documentation. This serves near real-time document verification.
- » With Parsable, data went from being processed and put into dashboards in seven to 30 days, to synchronized data every 24 hours with no data recapture.
- » Technicians are able to respond by prompts through the use of triggered notices in order to eliminate variability in execution.
- » Automated reporting has created a record outside of Parsable that serves as an auditable receipt of materials.

THE RESULTS

Created digital quality check for verification of CoA for brewing materials

Eliminated receipt errors across receipts of raw materials

Increased technician confidence in receiving materials

With Parsable, companies gain unprecedented visibility into their operations, uncover detailed data about their work processes for continuous improvement, and attract new tech-savvy talent.
