Digital Payments

Provision ERP's best-in-class payment solutions streamline your business.

Get simple, secure, and reliable payment processing and give your customers the convenience of making payments in-person, via phone or online. Provisions' payment processing engine, powered by Fiserv, includes Level II and Level III data with all transactions, which reduces processing fees. P2PE and tokenization secure your customers' cardholder data and make your company less of a target for data breaches. Plus, easy-to-read statements and transparent pricing mean you're never left wondering what you're paying for each month.

Optimizing Your Business

A study by the U.S. Federal Reserve showed that digital payments can help reduce the cost per invoice by 59%—between \$4-8 per invoice. For some CAI customers who process 10,000-50,000 invoices per year, this could mean \$40,000-\$200,000 in annual savings.

Provisions makes it easy to accept all major digital payment methods, including card-present/not-present credit cards, debit cards, and ACH payments. Lower costs, enhance cash flow, eliminate the worry about 'check's-in-the-mail' stories, bad checks, or delayed payments, and provide your customers with a robust electronic bill payment solution that maximizes availability, offers a consistent user experience, and requires less work from your AR team.

Document Management Capabilities

Improve Cash Flow

Digital payment methods help our customers get paid 24% faster, since funds are transferred electronically rather than being collected and applied to the correct invoice.

Reduce Costs

Reduce the cost and time spent on invoice processing by removing labor-intensive manual processes. Optionally include a handling fee to avoid absorbing the cost of credit card fees.

Increase Customer Convenience

Electronic payments provide a convenient way for customers to make payments at any time and from any location, rather than being limited to certain hours or physical locations.

Enhance Security

Provisions uses encryption and other security measures to protect you and your customers against fraud.

Maximize Efficiency

Reduce the time spent dealing with A/R, minimize errors, and improve payment processing efficiency.

Boost Competitiveness

Compete more effectively in an increasingly digital marketplace where customers are demanding a consumer-style payment experience.
