Modular MES for Advanced Manufacturing.

ShopVue is a Manufacturing Execution System (MES) built with manufacturers in mind, helping you transform raw materials into finished products with ease. For nearly 30 years, businesses like yours have trusted our modular, user-friendly software to make shop floor management simpler, smoother, and more efficient.

Flexible and Configurable

With more than 1,400 feature combinations, ShopVue addresses the unique needs of your business. It provides out-of-the-box interfaces to leading ERP, PLM, payroll, and other third-party systems.

Quick Time to Value

Implementation is typically completed in 8-12 weeks and customers achieve a positive ROI in 6-12 months.

Low Touch, High Efficiency

Built with the end user in mind. Operators and Supervisors love to use ShopVue. ShopVue delivers minimal manual entry while providing maximum insights.

Secure and Reliable

Role-based permissions ensure secure access profiles. Ask about our reference accounts to hear from ShopVue customers like you.

Shop Activity & Labor

Track labor and WIP status on-demand. Update your ERP continuously, improving its planning and tracking functions.

Traceability

Minimize recall exposure with forward / backward trace and comprehensive “as built” information.

Time & Attendance

Balance Attendance and Labor records in one system to understand and measure employee activities.

Digital Instructions

Provided step by step instructions with pictures and videos. Collect test data to validate quality and process.

Paperless Factory

Digitally communicate this shift's work list to operators, eliminating paper packets with online drawings and order information.

Manufacturing Analytics

Visualize KPIs like OTD, OLE, OEE, and WIP as it happens to leverage key insights for continuous improvement.

Direct Machine Interface

Capture key performance data like status, yield, and quantity automatically through your machine PLCs.

Smart Factory APIs

Leverage APIs for a seamless communication infrastructure, linking critical touch points for a real-time view of manufacturing operations.
